

Dear Hiring Manager,

I am writing to apply for the Web Developer position at Oracle. I have recently completed my Bachelor of Computer Applications and have hands-on experience in developing scalable web applications using PHP, MySQL, and JavaScript.

In my current role at MakeStudy, I have built and maintained real-world applications including authentication systems, dashboards, and CRUD-based modules. I also developed an OCR-based Passport Auto-Fill system using Tesseract OCR and AWS, which automated data extraction and significantly improved efficiency. This experience has strengthened my problem-solving skills and ability to work on practical, impactful solutions.

Additionally, I have worked on projects such as an AI Caption Generator and multiple responsive websites, where I focused on clean UI, performance, and seamless user experience. I am currently expanding my skills by learning Python and exploring AI-driven backend development.

I am eager to contribute to Oracle's innovative environment, apply my technical skills, and grow as a software developer while working on scalable and impactful projects.

Thank you for your time and consideration.

Sincerely,
Kajal Rajput
